

Programming Problems : 3.26

Purpose : Implement ordinary pipes for sending a string message and reversing the case of each character in the message

Input : a message

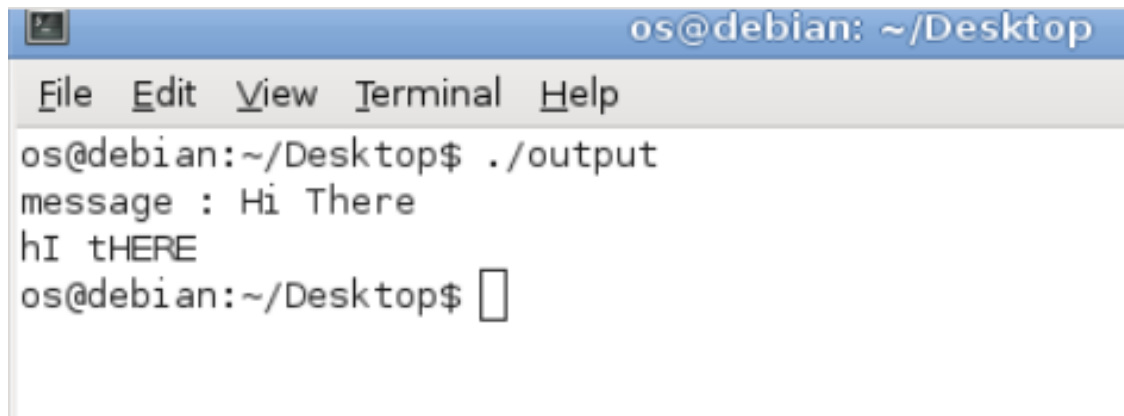

Output : reversed the case of each character of the message

OS : Linux

Capabilities :

A parent write message that read from user in a pipe

The child write message the message that reversed the case of each character of it

```
os@debian: ~/Desktop
File Edit View Terminal Help
os@debian:~/Desktop$ ./output
message : Hi There
hI tHERE
os@debian:~/Desktop$
```
