Programming Problems : 3.23

Purpose : Implement client–server architecture by sockets for sending quotes of the day

Input : none

Output : quotes of the day

**OS :** Windows

Capabilities :

A server that listen to port 6017

The server blocks on the accept() method waiting for a client to request a connection

The server writes some quotes to the socket

A client makes connection to server socket by port 6017

The client read quotes from the socket

```
DateServer (run) ×    DateClient (run) ×

    run:
    Your lucky color has faded.
    %

    Your lucky number has been disconnected.
    %

    Your true value depends entirely on what you are compared with.
    %

    Your lucky number is 3552664958674928.   Watch for it everywhere.
    %

    BUILD SUCCESSFUL (total time: 0 seconds)
```
